

Actual lead-mapping matrices | rank and singular spectrum preserved

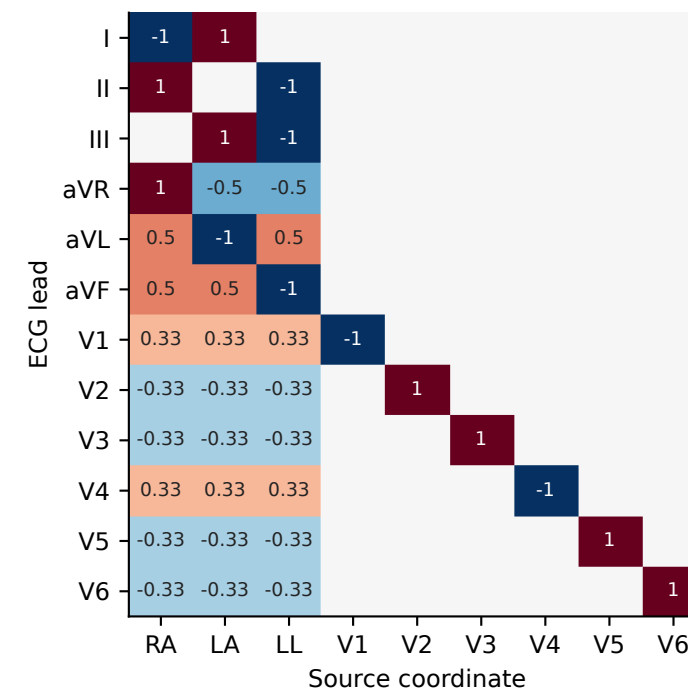

Standard A | rank 8
Frozen reference

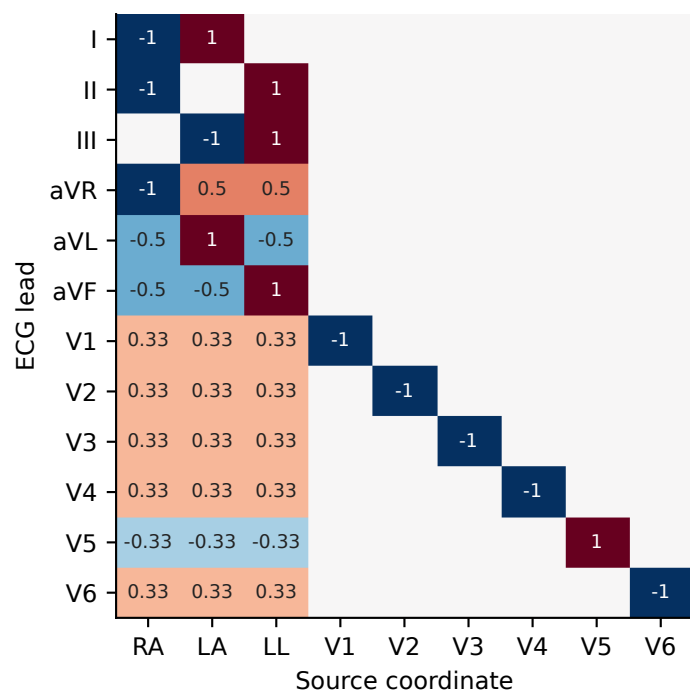

S_00 | rank 8
Candidate 1

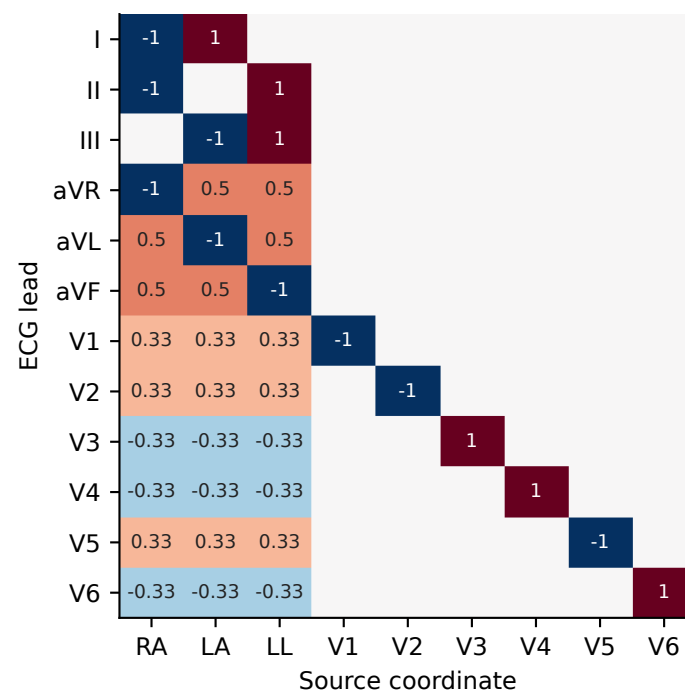

S_01 | rank 8
Candidate 2

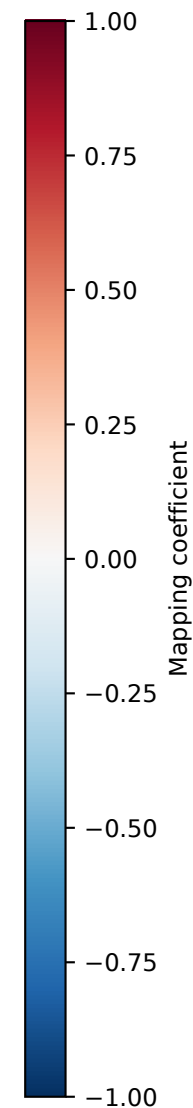

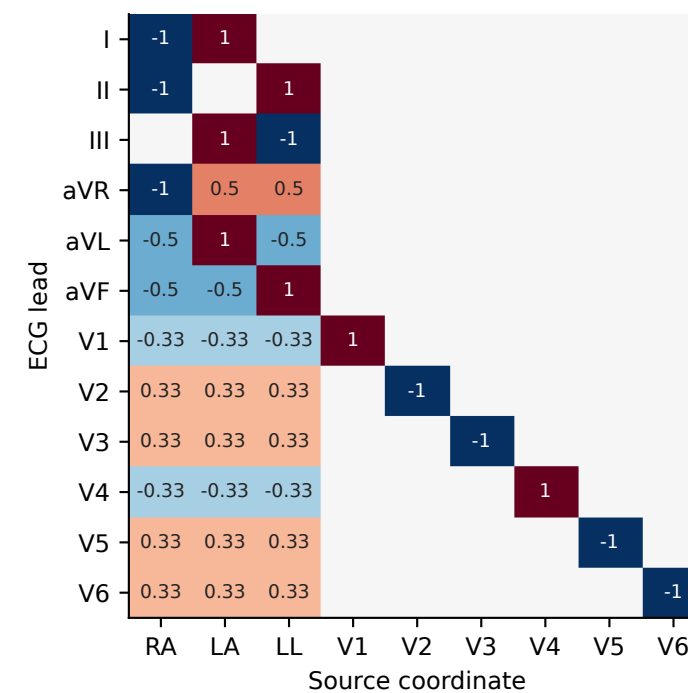

S_02 | rank 8
Candidate 5

S_03 | rank 8
Candidate 8

S_04 | rank 8
Candidate 10

All panels use the same coefficient colour scale; blank cells are exact zeros. $A_{\text{signed}} = \text{diag}(s) A$; no entries are reconstructed from performance. These are mathematical signed-direction controls, not physical acquisition-error simulations. Source coordinate labels follow the frozen Standard matrix.
