

True-class positive and negative exposure distributions

Standard E Independent I Signed 0 Signed 1 Signed 2 Signed 3 Signed 4

Solid: ground-truth positive; dashed: ground-truth negative (not predicted classifications).
Each class retains six fixed noise exposures per ECG and seven separate conditions; no checkpoint replication, reweighting, or causal claim.
All original predictions were label/identity joined before this display. Finite values only on curves; null/+inf counts remain in audited summaries.
