

Performance and geometry aligned by nominal SNR

Standard E Independent I Signed 0 Signed 1 Signed 2 Signed 3 Signed 4

Top: original-probability AUROC, equal mean across six fixed noises within each of three checkpoints, then across checkpoints.
Bottom: geometry median, IQR and 5th–95th percentiles; condition offsets are display-only around nominal 0/5/10 dB.
This is a parallel display—not equal exposure, causal mediation, or new patient uncertainty. E/I and modes retain original weights.
