

ResNet | Phase 1: 3 seeds

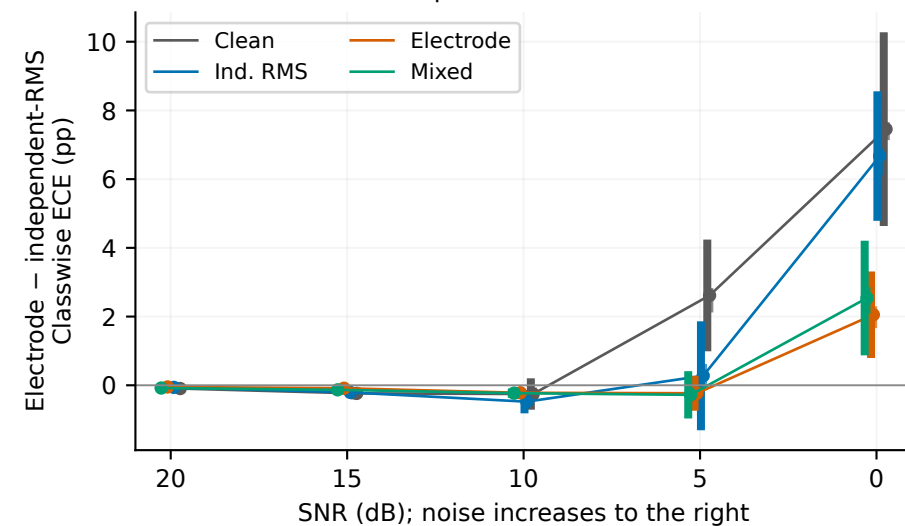

TCN | Phase 1: 3 seeds

ResNet | Phase 2: 5 seeds

TCN | Phase 2: 5 seeds

Thin: paired patient 95% CI; thick: ± 1 training-seed SD. Fixed noises: phase 1 $n=6$; phase 2 $n=5$. Phases are not pooled. Positive ECE differences mean worse calibration. Small x offsets separate strategies at the same SNR.
