

Noise realization stability | Joint unseen group

Each marker is one fixed noise base after averaging paired training seeds. Bars are descriptive sample SD across noise bases, not training SD, not a confidence interval, and not extra independent training runs. All registered noise bases are displayed.

● Noise base 20001 ▲ Noise base 20003 ▼ Noise base 20005 — Noise-base mean +/- SD
 ■ Noise base 20002 ◆ Noise base 20004
