

Clean performance cost (descriptive)

TECHNICAL PILOT; not confirmatory. Positive clean cost means worse clean performance than same-seed clean-only; no clinical acceptability margin was prespecified. One training seed: points only; training SD and t intervals are not estimable. Small dots are individual training seeds. AUROC squares show 95% patient-cluster percentile CIs conditional on the fixed checkpoints and noise; they do not include training variability.

● Clean only ● Independent RMS augmentation ● Electrode augmentation ● Mixed augmentation
