

Supplement | Gaussian held-out-combination performance

TECHNICAL PILOT; not confirmatory. Secondary metrics for held-out combinations, faceted by architecture and perturbation structure. One training seed: points only; training SD and t intervals are not estimable. 15/5 dB are unseen and 0 dB is pressure. F1 uses fixed clean-validation thresholds. Complete training/all-electrode secondary curves and all drop values remain in the saved CSVs; they are not omitted from analysis.

— Clean only — Independent RMS augmentation — Electrode augmentation — Mixed augmentation
